

TomTom PRO

Release note for firmware version: 12.103

March 2014

Why should the TomTom PRO be updated?

We always recommend that you install the latest application on your TomTom PRO navigation device to benefit from newly implemented features and software that improve the performance and the stability of your TomTom PRO.

Which features have been added or improved?

Route Planning

An issue where the **Route planning preferences** always default to fastest route when the vehicle types **Car** or **Bus** had been selected has now been resolved.

Shortest route has been re-introduced to show in the **Route planning preferences**.

Traffic

When an RDS TMC antenna is attached to a TomTom PRO device the RDS TMC antenna traffic feed would be prioritised over the GPRS LIVE feed HD Traffic. This is has been resolved with this release.

Order

When a PRO device would receive an order while shutting down, the PRO automatically confirmed the reception of the order, but the order would not been stored on the PRO device. This has been resolved with this release.

Logbook confirmation

An issue where the logbook confirmation screen keeps on displaying as long as the PRO does not connect to the LINK 510, has now been resolved.

A PRO unit reported **Business** by default although **Private** was selected before. This has now been resolved.

General improvements

General improvements of LIVE Services and general connectivity have been implemented in this firmware version.

Various other improvements have been implemented in this firmware version.
